### Exercise 2.1 (Multiplication and convolution on $\mathcal{S}'$ )

Let  $g \in \mathcal{S}(\mathbb{R}^d)$  and define the multiplication by  $g$  as a map  $(M_g f)(x) := g(x)f(x)$ .

- a) Show that  $M'_g : \mathcal{S}'(\mathbb{R}^d) \rightarrow \mathcal{S}'(\mathbb{R}^d)$  is linear and continuous;
- b) For  $\varphi \in \mathcal{S}'(\mathbb{R}^d)$  define multiplication with  $g$  by  $g\varphi := M'_g \varphi$  and show that

$$\mathcal{F}(g\varphi) = (2\pi)^{-d/2} \hat{g} * \hat{\varphi},$$

where  $*$  is the convolution of  $\hat{g} \in \mathcal{S}(\mathbb{R}^d)$  with  $\hat{\varphi} \in \mathcal{S}'(\mathbb{R}^d)$  defined in the lecture.

### Exercise 2.2 (The $\delta'$ distribution)

Set for  $f \in \mathcal{S}(\mathbb{R})$

$$\delta'(f) = \frac{df}{dx}(0).$$

Show that  $\delta'$  defines a tempered distribution.

### Exercise 2.3 (The Fourier transform of complex Gaussians II)

Let  $t > 0$  and set for  $\varepsilon \geq 0$

$$f_\varepsilon(x) := e^{-(it+\varepsilon)x^2/2}.$$

- a) Show that  $f_\varepsilon \rightarrow f_0$  in  $\mathcal{S}'(\mathbb{R})$  as  $\varepsilon \rightarrow 0$ ;
- b) Show that

$$\hat{f}_0(p) = \frac{e^{i\frac{p^2}{2t}}}{\sqrt{it}}.$$

Can you explain the relation to Exercise 1.4?

*Hint:* We know from Exercise 1.2 that for  $\varepsilon > 0$

$$\hat{f}_\varepsilon(p) = \frac{e^{-\frac{p^2}{2(it+\varepsilon)}}}{\sqrt{it+\varepsilon}}.$$

## Homework

### Exercise 2.4 (The delta distribution)

Define for  $f \in \mathcal{S}(\mathbb{R}^d)$

$$\delta_0(f) := f(0).$$

Let  $g \in L^1(\mathbb{R}^d)$  with  $\int_{\mathbb{R}^d} g = 1$  and define, for  $\epsilon > 0$ ,  $g_\epsilon(x) := \epsilon^{-d}g(\epsilon^{-1}x)$ . Then for every  $\epsilon > 0$ ,  $\varphi_\epsilon = \varphi_{g_\epsilon}$  is a regular distribution.

- Show that  $\varphi_\epsilon \rightarrow \delta_0$  in  $\mathcal{S}'(\mathbb{R}^d)$ , as  $\epsilon \rightarrow 0$ ;
- Let  $\theta \in \mathcal{S}'(\mathbb{R})$  be defined by  $\theta(f) := \int_{\mathbb{R}} 1_{[0,\infty)}(x)f(x)dx$ . Prove that  $\frac{d}{dx}\theta = \delta_0$ . (Here  $\frac{d}{dx} := (\partial^1)_{\mathcal{S}'}$  is the distributional derivative as defined in the lecture).
- Prove that  $\delta_0$  is not a regular distribution.

Hand in on 31.01.2024 before the lecture or by 10:00 by mail to [jonas.lampart@u-bourgogne.fr](mailto:jonas.lampart@u-bourgogne.fr).
